

could I be affected by kidney disease ?

Kidney disease can affect anybody.

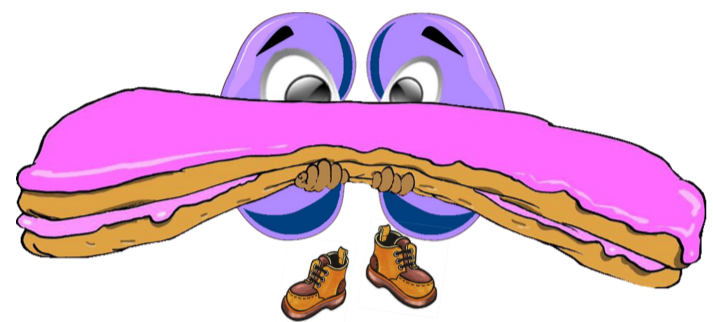

However, particular health problems increase the risk of having kidney disease :

hypertension

(high blood pressure)

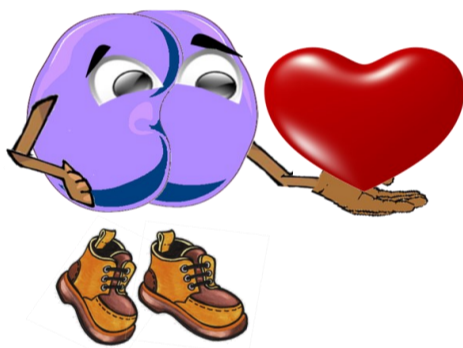

diabetes

cardio-vascular disease

arteritis, stroke,
high cholesterol levels,
heart disease...

chronic viral disease

hepatitis B
hepatitis C
or HIV

urinary tract problems

kidney stones,
renal colic, urinary tract
infection, urinary tract
malformation.

potentially dangerous medications for kidneys

NSAID, lithium,
chemotherapy, PPIs, antibiotics,...

personal or family history of kidney disease

If you have one or more these problems, we advise you to come and meet us on **Monday 12th November 2018** from **2:30 PM.**
